## **Error While Injecting Dll Into Target Process 3d Analyze \_BEST\_**

I get the following error when trying to use 3D Analyzer to figure out 3D errors in my game: Error while injecting dll into target process. 3d Analyser Achievement Unlocked, 3D analyser I have just updated 3D Analyzer to version 0.6.9.6, however I get the following error when I try to run my game: "Error while injecting dll into target process". This has happened before, but I managed to run the game by unchecking "Read-Only". I did this just now to see if it would work, and as I say, I get the error, only this time it is when I try to uncheck the "Read-Only" option in the game properties. I have heard this error can be caused by a number of issues, not only by the game not being able to read the write protection on the drive, but also by the 3D analyser not being able to run because the game is set to read-only. Error While Injecting Dll Into Target Process 3d Analyser Also, I believe that many people prefer to run games in admin (not as normal user) with 3D Analyser. I don't know if it will solve the problem, but it might.\]
