□ MaxtoCode 1.3.0 and above support 64 bit support. □ MaxtoCode 1.3.0 and above has pretty much all encryption algorithms that are supported by .NET Framework such as TripleDES, RC2, RC4,

---

AES, RSA, Rijndael and others. □ The maximum length of the encryption key is 256 bits. The key length can be adjusted according to the requirements. □ Key strength can be adjusted by specifying key lengths in bytes. □ If the length of the key is less than 128, then the default Aes/Rfc2104 algorithm will be used. □ This encryption software support multi-threading to encrypt and decrypt data. □ Supports AES, RC2, RC4, RSA, Rijndael, Twofish, Camellia, and 3DES encryption algorithms. □ First version is released for c#, Java and Delphi.NET platform. □ Compression algorithm: LZMA, LZ4, ZIP, □ Supports x86, x64, ARM, 64-bit, Any CPU, and Mono platforms. □ Supports ASP.NET, ASP, ASP.NET MVC, ASP.NET Core, and MVC platforms. □ Supports ARC, CIL, C#, Java, Pascal, Delphi.NET platform. □ Supports Mono, OS X, Linux, NetBSD, FreeBSD, OpenBSD, Windows NT, Windows 2000, and Windows XP platforms. □ Supports 32-bit and 64-bit platforms. ## **MaxtoCode Standard With Full Keygen (April-2022)**

Please free download and try and feel free to share with you friends. MaxtoCode Standard Download: MaxtoCode Standard is one of our main products, It is powerfull, stable, easy to use and comfortable. MaxtoCode Standard is built up by a professional dev team, it is a multi-platform, multi-language and multi-mode application, it can protect.Net source codes, assembly, obj, swf and other runtime files, it is one of the most powerful encryption tool. MaxtoCode Standard is a step between obfuscation and encryption, it creates high high level of security and easy to use.

MaxtoCode Standard: MaxtoCode Standard provides two different mode according to your needs, even some exclusive protective method like fully automatic security. MaxtoCode Standard is built up by professional dev team, it is a multi-platform, multi-language and multi-mode application, it can protect.Net source codes, assembly, obj, swf and other runtime files.

MaxtoCode Standard is a step between obfuscation and encryption, it creates high level of security and easy to use. The features of MaxtoCode Standard: MaxtoCode Standard is a lightweight, easy to use and comfortable protection solution. MaxtoCode Standard can cover .NET source codes, assembly, obj, swf and other runtime files. It is a standalone application, it does not require to interact with the .NET Framework. MaxtoCode Standard can cover 1 file or multiple file types at the same time. It is a highly efficient, powerful, easy to use and comfortable protection solution. MaxtoCode Standard can encode and decode contents of c#, VB.NET, java, C++, c++/cli, VBS, perl, batch, msi, exe, and other file type. It is a compact and lightweight tool, it can be integrated with Visual Studio IDE. It also provides the log record, error reporting, user preferences

#### **What's New in the MaxtoCode Standard?**

MaxtoCode Standard is high performing and

---

efficient. MaxtoCode Standard works as a decrypted kernel. MaxtoCode Standard offers outstanding protection to the kernel. It keeps the kernel protected from the beginning of the code and makes it more difficult to crack the kernel due to an excellently designed Kernel Guard Block. MaxtoCode Standard uses Digital Code Protector Engine (DCPE) to protect itself and the kernel from the beginning to the end. MaxtoCode Standard offers excellently designed Kernel Guard Block and Kernel Guard Area. MaxtoCode Standard strengthens the kernel by releasing the kernel from itself and creates protection for itself as well. MaxtoCode Standard decreases the kernel from the inside, making it easier to detect and remove the kernel. MaxtoCode Standard offers thorough and flawless protection because it encrypts the kernel with excellent algorithm such as Blowfish, Twofish, and IDEA. MaxtoCode Standard owns the Rijndael algorithm for flexibility to be able to decrypt with the most advanced decryption algorithms such as Rijndael, RSA, Twofish, and Camellia. MaxtoCode Standard further offers flexibility to be able to work with the best NAND Encryption Algorithm. MaxtoCode Standard offers superior compression of the kernel with the help of LZO compression. It ensures that the kernel is

---

correctly compressed and decompressed as the kernel is not protected and compressed in the same time. It provides a kernel decompression function, which allows the kernel to be decompressed without any problem. MaxtoCode Standard works fine with the kernel decompression function. MaxtoCode Standard provides the function to change Kernel Guard Area. It is not recommended to do that because after the kernel is changed the kernel will be unprotected from the beginning. MaxtoCode Standard's Kernel Guard Area can be changed in a number of ways. You can change the Kernel Guard Area in the configuration file or you can change it on the fly to provide an unlimited kernel protection. MaxtoCode Standard provides a feature to convert the kernel into Core Image to keep the kernel protected from the beginning of the kernel. MaxtoCode Standard works with Kernel.sys File. It uses Kernel.sys file to hide itself from the user. It works with Kernel.sys file by providing an option to set Kernel Guard Area. MaxtoCode Standard works under a PC running Windows XP Professional, Windows 2000 or Windows 2000 Server
