Sixty-six clinical isolates of Pseudomonas aeruginosa obtained from inpatients were studied for susceptibility to ticarcillin, ticarcillin/clavulanate, piperacillin and piperacillin/tazobactam. MIC was determined using the E-test and agar dilution methods and the following six penems, in concentrations ranging from 0.015-16 mg/l, were tested: piperacillin, ertapenem, imipenem, meropenem, panipenem and doripenem. Antibiotics with b-lactamase-inhibitory activity were tested in combination with tazobactam. The results were: piperacillin: 2/66 strains resistant, 64% resistant, MIC(50) 4 mg/l; ticarcillin/clavulanate: 7/66 strains resistant, 12.1% resistant, MIC(50) 64 mg/l. Ertapenem: 3/66 strains resistant, 66.7% resistant, MIC(50) 1 mg/l; imipenem: 2/66 strains resistant, 46
