Exposing your image When you add new images into your image library, the Create New Organizer window opens. On the left side of the window is an area for choosing a destination folder for saving images. As with many programs, you have a number of options for compressing and optimizing your photos, and the screenshot in Figure 1-15 demonstrates these options, as well as showing you how to change them.

Choose your preferred settings and click Open to add the photo to your library. FIGURE 1-15: The Create New Organizer is where you can choose your destination for image storage. Click the File tab to summon the image's file. Figure 1-16 illustrates how you can remove unwanted elements from the image. In the Invert Selection pane, you can control whether the selection becomes transparent or opaque. You can choose Edit⇒Invert and then press Ctrl+I to display all the edges around the image, making it much easier to select just the edges you want. Click OK to apply the selection. FIGURE 1-16: Use the Invert Selection option to remove unwanted parts of the image. You can also select an area of your image by using the Magic Wand tool. In the Tools panel, open the Magic Wand and select the patch of color that you want to work on. Click and drag to select the area of the image you want, and then drag to the right to remove any part of the image you don't want. (See Figure 1-17.) FIGURE 1-17: Click and drag the cursor to select and then drag to the right to remove areas.
