Adobe Photoshop is a graphics editor originally developed by Adobe Systems, and first released on April 24, 1987. Its primary focus is to edit raster graphics images, such as photography, maps, documents, logos, web pages, slideshows, or videos. It is used extensively for web page design, graphic arts, and all sorts of other professional projects. As an editor, Photoshop supports sophisticated design options, but also is primarily designed to be an image editor. The basic toolset of color adjustments and special effects are the largest and most popular category among all users. This chapter covers Photoshop basics that should serve as a good introduction into the world of Photoshop. A general sense of how Photoshop works is the first step before delving deeper into editing images. Photoshop offers many editing tools, such as the Clone Stamp, the Spot Healing Brush, the Blend, the Healing Brush, and the Radial Filter, all of which produce different effects on a raster image. Photoshop also has a selection tool that allows you to modify selected areas of a raster image. Photoshop also includes a special adjustment layer that allows the user to change the brightness and contrast of a selected image. The majority of the features in Photoshop are available in different modes. The utility works in three modes: The Standard mode is the default mode, where each command is enabled by default. The Quick mode is a preview mode, where users can test their work by viewing it in the viewport while performing the operation. The Expert mode allows the user to turn off specific commands or to add new commands. This chapter covers all three modes and their features and supports users as they learn how to use Photoshop effectively. Before Moving the Slider Before using any commands or features in Photoshop, you first need to open a new image, or click on the Open button on the top left of the Photoshop window. The first step is to select a "Photoshop" or "PSD" file from the program's drop down menu, and open a new image in Photoshop. Figure 1 shows that dialog box, and Figure 2 shows the typical result after opening a new image. Figure 1: The Open dialog box. Figure 2: The new image open dialog box. In the figure, you can see that the image is named "0001.jpg." Any file you open in Photoshop will have a name such as this.

challenge: the game is rigged, or is it? Hoping to keep costs low, telecommunications providers are pushing services on more people than ever. But do they really have what it takes to deliver? There are few things in business that are certainties — especially in this notoriously unpredictable industry. The telecom industry, however, has some of the most clear and predictable players on the block. The four players in this space are Cablecos, the incumbents all of which, unlike the mobile players, have been forced to spend heavily to stay alive. They include Telstra, TelstraClear, Vodafone Hutchison Australia and Optus. Cablecos boast fixed-line networks the size of whole countries. Optus has just committed to spend billions of dollars acquiring TelstraClear and Vodafone Hutchison Australia, but offers some competition by having the capacity to deliver at least a gigabit per second of data across its network. The mobile telecom industry, on the other hand, is a total unknown. While their growth over the past three years has been phenomenal, they haven't quite built the stable foundation of infrastructure, commitment to the market or loyal customer base that allows a telecoms company to survive and grow. And while they have competed with the four wired players, the mobile players, by nature of their business models, are frequently at odds. One is about roaming, the other around consumer expectations. The Mobile Black Spot operator says the networks are not up to it; the Big Two networks say that mobile is expensive, slow and unreliable. Indeed, the issues of mobile growing too fast, introducing new pricing models too quickly, unable to reliably solve roaming and co-ver with the wired world and deal with the emerging "network now" phenomena are all genuine challenges. It's that last one that is again, most misunderstood. The business strategy of the mobile players is, more often than not, quite clear. They are the first in most markets — like 3G — to offer the technology, like Smartphone plans, and well-known brands. But the mobile operator, in its infancy as a standalone business, has a long way to go to prove its survival and growth. What it needs is a stable customer base, profitable revenue, new ways to generate revenue and a credible network. In a telco-dominated market, those are going to be difficult to achieve 388ed7b0c7

Quiksilver Baja Surf and Music Festival The Quiksilver Baja Surf and Music Festival (formerly known as the Baja Surf and Music Festival and Baja Slopes) is a music festival held in Puerto Vallarta, Mexico every May. It was established in 1998. The organizers behind the festival include Mike Caffey of Caffé Sole, Steve Vai of the Steve Vai Trio, Kenny Aronoff, owner of Suicidal Tendencies, and Danny Carey of Tool. The event takes place in May at the Las Playas Beach Resort on the border of Jalisco and Nayarit. The festival features over 100 musical acts, including several world-renowned bands. Also playing include legendary thrash metal band Kreator, folk rock outfit La Junta, Mexican hard rockers Plastilina Mosh, Mexico's own punk rock act Abará, and heavy metal and hard rock act Razorlight. In 2008, two separate festivals were held: A "Rock" festival in September and a "Surf" festival in October. Notably, in 2015, Fozzy frontman Chris Adler, frontman for metal band Soilwork, was added to the lineup of artists, where he performed all of his own material. Entertainment The festival features stages dedicated to metal, rock, hip hop and country music. Q: How to configure SpringBoot Java Mail Sender to avoid smtp.gmail.com warning? I have a problem with my application. I receive this message : Caused by: java.net.ConnectException: sun.security.validator.ValidatorException: PKIX path building failed: sun.security.provider.certpath.SunCertPathBuilderException: unable to find valid certification path to requested target Here is my app.properties: spring.mail.host=smtp.gmail.com spring.mail.username=xxxx@gmail.com spring.mail.password=xxxx spring.mail.properties.mail.smtp.auth=true spring.mail.properties.mail.smtp.starttls.enable=true A: Based on the tag Java, I assume you're using the Gmail SMTP API (If so, the issue is that SSL is not enabled by default. You must set this in the SMTPClient. On the Java documentation page for the API you link to, there's a getSupportedSslProtocols() method that returns a list of SSL protocols that your Gmail credentials will use. If none of them are enabled, you must enable them by supplying an X509TrustManager object like this: SSLContext context = SSLContext.getInstance("TLS"); context.init(null, null, null); TrustManagerFactory trustManagerFactory = TrustManagerFactory.getInstance(TrustManagerFactory.getDefaultAlgorithm()); trustManagerFactory.init(new java.security.SecureRandom()); SSLContext.setDefault(context); Hence, you need to set spring.mail.properties.mail.smtp.starttls.enable to true and set spring.mail.properties.mail.smtp.auth to true. If you use the Java Mail API (you can use the following configuration, which uses the default "simple" API with SMTP AUTH enabled. import java.util.*; import javax.mail.*; import javax.mail.internet.InternetAddress; import javax.mail.internet.MimeMessage; import javax.mail.mail
