The design can be arranged into layers and blocks (geometrical constructs). Layers, which are part of the base document, are used to group drawings and data. The block layer is used to define data in blocks (or packages) which are used to combine blocks into larger structures. The AutoCAD Architecture Library (AcadLib) contains code to access the data structure in the design. The AutoCAD Architecture

Runtime (AcadRun) is the interface between the two and provides the functions to support the basic editing and plotting functions. AcadRun is responsible for loading the data structure and determining where to write the drawing.
